1 Problem

Trace the curve

$$35x^2 + 30y^2 + 32x - 108y - 12xy + 59 = 0 \quad (1.0.1)$$

Express this conic section in the from

$$\mathbf{x}^T\mathbf{V}\mathbf{x} + 2\mathbf{u}^T\mathbf{x} + f = 0 \quad (1.0.2)$$

and perform QR decomposition for the matrix V.

2 Solution

$$\mathbf{V} = \begin{pmatrix} 35 & -6 \\ -6 & 30 \end{pmatrix} \quad (2.0.1)$$

If, $\mathbf{V} = \begin{pmatrix} a_1 & b_1 \\ a_2 & b_2 \end{pmatrix}$ Consider, $\mathbf{V} = \begin{pmatrix} \mathbf{a} & \mathbf{b} \end{pmatrix}$

$$\text{Where, } \mathbf{a} = \begin{pmatrix} a1 \\ a2 \end{pmatrix} \text{and } \mathbf{b} = \begin{pmatrix} b1 \\ b2 \end{pmatrix} \quad (2.0.2)$$

$$\text{Then, } \mathbf{u_1} = \mathbf{a} \text{ , } \mathbf{e_1} = \frac{\mathbf{u_1}}{||\mathbf{u_1}||}$$

$$\mathbf{u_2} = \mathbf{b} - \left(\mathbf{b}^T\mathbf{e_1}\right)\mathbf{e_1} \text{ , } \mathbf{e_2} = \frac{\mathbf{u_2}}{||\mathbf{u_2}||} \quad (2.0.3)$$

$$\text{and, } \mathbf{V} = \begin{pmatrix} \mathbf{e_1} & \mathbf{e_2} \end{pmatrix} \begin{pmatrix} \mathbf{a}^T\mathbf{e_1} & \mathbf{b}^T\mathbf{e_1} \\ 0 & \mathbf{b}^T\mathbf{e_2} \end{pmatrix} = \mathbf{QR} \quad (2.0.4)$$

Performing QR decomposition on $\mathbf{V}$ we get,

$$\mathbf{e_1} = \frac{1}{\sqrt{1261}} \begin{pmatrix} 35 \\ -6 \end{pmatrix} \quad (2.0.5)$$

$$\mathbf{e_2} = \begin{pmatrix} \frac{168622}{1000000} \\ \frac{9856}{10000} \end{pmatrix} \quad (2.0.6)$$

$$\mathbf{Q} = \begin{pmatrix} \mathbf{e_1} & \mathbf{e_2} \end{pmatrix} \quad (2.0.7)$$

$$\mathbf{Q} = \begin{pmatrix} \frac{35}{\sqrt{1261}} & \frac{168622}{1000000} \\ \frac{-6}{\sqrt{1261}} & \frac{9856}{10000} \end{pmatrix} \quad (2.0.8)$$

$$\mathbf{R} = \begin{pmatrix} \sqrt{1261} & \frac{-10982647}{1000000} \\ 0 & \frac{2855488}{100000} \end{pmatrix} \quad (2.0.9)$$

It is easy to verify that $\mathbf{QR} = \mathbf{V}$ and $\mathbf{Q}^T\mathbf{Q} = \mathbf{I}$. Thus, $\mathbf{V}$ is decomposed into an orthogonal matrix and an upper triangular matrix.
